Impact of Rising Brent Oil Prices on Thailand's Economy:

June 16, 2025 – March 23, 2026

Anunchai Meeyen
Aspiring Data Analyst | Bangkok, Thailand | March 2026

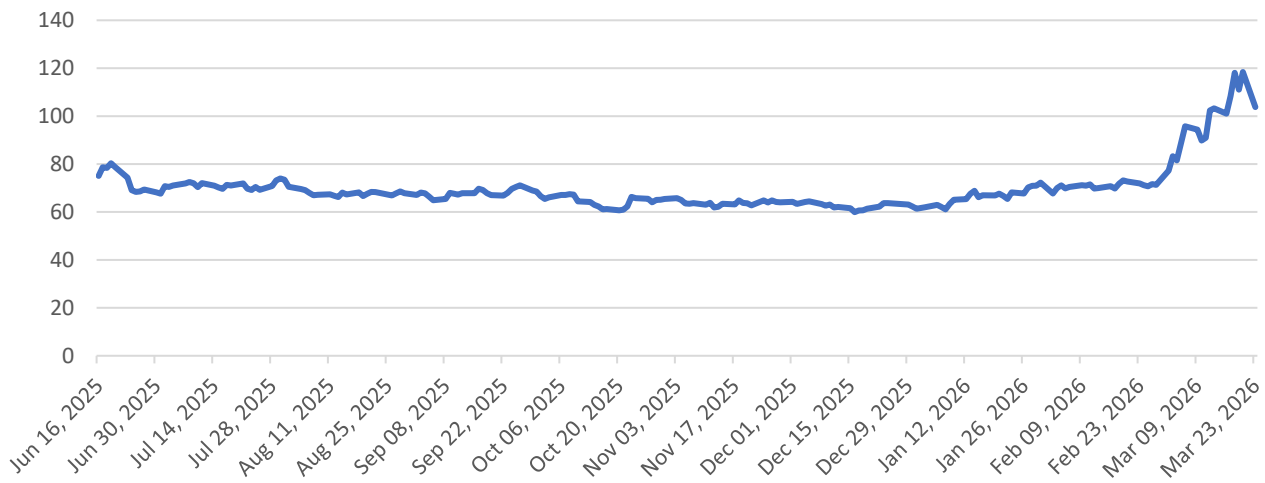
Project Objective

Thailand relies on imported oil. Brent crude prices were relatively stable between June 2025 and early 2026 before increasing significantly in March 2026. This analysis examines the price trend and its impact on Thailand's economy.

Data Sources & Tools

- Brent Crude Oil: U.S. Energy Information Administration (EIA)
- Thailand Diesel Prices: EPPO and market reports
- Tools: Microsoft Excel (charts & calculations)
- Period: June 16, 2025 to March 23, 2026

Brent Crude Oil Price Trend (June 16, 2025 – March 23, 2026)



Key Observation: Oil prices increased sharply from **59.93 USD/barrel to 118 USD/barrel.** This represents a significant increase.

Percentage Increase

- Minimum Price: **59.93 USD/barrel**
- Maximum Price (March 2026 peak): **118 USD/barrel**
- % Increase (Min to Max): **+96.9% (almost doubled)**
- Current Price (Mar 26, 2026): **103.79 USD/barrel**
- % Increase (Min to Current): **+73.19%**

Impact on Thailand

- Diesel price increased from 32–33 THB/liter to **38.94 THB/liter** as of March 23, 2026.
- 2025 GDP Growth: +2.4% (Q4: +2.5%)
- 2026 GDP forecast: 1.5% – 2.5%
- Risk: If oil prices increase, it could hurt Thailand's economy. Every $10 increase may reduce GDP growth by 0.2–0.4 percentage points and increase inflation. (statement by the Governor of the Bank of Thailand)

Key Insights & Recommendations

Insights

- Brent oil prices **increased 96.9%** from 59.93 USD to 118 USD in March 2026.
- Thailand is highly vulnerable to oil price changes because it imports a large portion of its oil.

Recommendations

- Strengthen the oil reserves plan.
- Increase the use of renewable energy.
- Use data analysis to help predict economic impacts.
